

Joseph Oyenibi

malphey04@gmail.com

09133019321

Lagos, Nigeria.

PROFILE

A motivated Mechatronics Engineering student with strong interests in robotics, embedded systems, control systems, automation, and electromechanical systems. Skilled in Arduino and Raspberry Pi-based projects, motor control, sensors, encoders, and robotic navigation, with practical experience in engineering design, system integration, hardware troubleshooting, and multidisciplinary projects. Familiar with ROS, MATLAB/Simulink, Proteus, AutoCAD, and modern AI concepts, with additional skills in web development using HTML and Elementor, Python full-stack development, and UI/UX design. Passionate about combining mechanical, electrical, and software engineering knowledge to develop practical, efficient, and user-friendly technical solutions.

EDUCATION

Mechatronics Engineering, Federal University Oye-Ekiti

2020 – 2026

CGPA: Second Class Upper (3.69/5.00)

Ekiti, Nigeria

Completed: 2026 | Awaiting formal clearance and Statement of Result

RELEVANT COURSEWORK

- Automation & Robotics • Microcomputers & Embedded Systems • Mobile Robotics • Control Systems
- Computer Vision • Digital Signal Modeling • Machine Learning • Mechatronics System Design
- Sensors & Instrumentation • Reliability Engineering

PROFESSIONAL EXPERIENCE

Freelance Website Designer

09/2020 – present

Remote

- Designed and developed websites for multiple clients using **HTML, CSS, JavaScript, and WordPress**, consistently demonstrating technical proficiency and creative problem-solving.
- Managed project timelines and client communications, ensuring seamless workflow and high client satisfaction.
- Collaborated with clients to gather requirements, identify needs, and implement tailored solutions, strengthening teamwork and client-focused service.
- Created **responsive, user-friendly interfaces** while applying essential principles of web design and functionality.
- Integrated **basic automation elements** into websites, nurturing a growing interest in systems and process optimization.
- Developed websites for various industries, reflecting versatility and adaptability in handling diverse project requirements.

Notable Client Projects:

- Rock Realty Limited
- Early Year Tutors Academy
- Elvis Kachi

- Tummy Repair
- MonetizeHR
- Space Button Architecture
- Msizzles Catering
- Gokeville Properties
- Gokeville Diabetes Foundation

SIWES Trainee, MORPOL Engineering Services

03/2025 – 09/2025

Lagos, Nigeria

- Assisted with engineering activities within an EPC environment covering Oil & Gas, Power, Water, and Wastewater projects.
- Assisted with Material Take-Off (MTO) and Bill of Quantities (BOQ) preparation.
- Participated in activities related to a 200 kVA, 11/0.4 kV distribution transformer and mini-substation installation.
- Observed and assisted with electrical testing activities including earth resistance, insulation resistance, and transformer winding continuity testing.
- Designed and updated an emergency evacuation plan using AutoCAD and supported preparation of the final graphical documentation.
- Assisted with site activities and supervised technical work carried out by electrical technicians.
- Developed practical awareness of engineering safety procedures, equipment installation, testing, documentation, and project execution.

PROJECTS

Navigation Control of an Automatic Guided Vehicle with Imitation Learning,

Final Year Project | Mechatronics Engineering

- Developing a navigation and control system for an Automatic Guided Vehicle (AGV) using imitation learning.
- Working with Raspberry Pi 4B and Arduino Uno for high-level processing and low-level motor control.
- Integrating a LiDAR sensor for environmental sensing and navigation.
- Implementing DC geared motors with two-phase Hall-effect encoders for feedback.
- Using an L298N motor driver for motor control and an XL4015 buck converter for power regulation.
- Exploring ROS for robotics system development and integration.
- Developing knowledge of sensor feedback, navigation, motor control, and real-time robotic systems.

Wooden Safe with Fingerprint Sensor and Solenoid Lock Arduino-Based Embedded Systems Project

- Designed and developed an electronic security system using an Arduino microcontroller.
- Integrated a fingerprint sensor and solenoid locking mechanism.
- Developed practical experience with sensors, actuators, microcontrollers, wiring, and system troubleshooting.

Rechargeable Light with Type-C Charging

- Worked as part of a team to design and develop a rechargeable lighting system.
- Gained practical experience in basic electronics, power management, component integration, and hardware assembly.

INTERESTS

- Robotics & Automation
- ROV & Subsea Robotics
- Vehicle Navigation & Control
- Control Systems
- Electric Motor & Drive Systems
- Embedded Systems
- Electric Vehicles and Automotive Technology
